

thinking about..

addressing questions of science and faith

Christians in Science are releasing a fantastic new set of resources for your churches, entitled “Thinking About...”

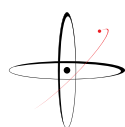

Science raises some issues that the church can find difficult or ill-equipped to address. Christians in Science have produced a series of introductory leaflets on these topics that are written by Christians who are professional scientists. They are specifically designed to help Christians that do not have a scientific background understand better the relevant science, and any issues that it presents for the Christian.

Each leaflet outlines the basic science behind the topic, how it relates to the Christian (biblical) understanding of the world and suggests some other resources for those who want to take it further. Titles include: *Bioethics, Creation Care, Evolution, Fine Tuning, Genetic Modification, How we interpret Genesis, Human Enhancement, Miracles, Neuroscience, Science and Apologetics, Science as a Christian Vocation, and Stem Cells.*

More titles will be added to the series in the coming months.

To get these resources free for your church, please contact Emily at emily@cis.org.uk
