User's Guide to Science and Belief

MICHAEL POOLE is Visiting Research Fellow in Science and Religion at King's College, London.

'An indispensable companion for those seeking to explore the spiritual implications of scientific discoveries. Highly readable, it is nevertheless a penetrating analysis of the manner in which the science/religion dialogue is conducted.'

Russell Stannard, Emeritus Professor of Physics, The Open University

Science and belief are both very important for us in our 21st century society. Is it really necessary to choose between them?

The view that science and belief are in conflict is a major stumbling block for many students today. In this new and substantially rewritten edition of the best-selling *User's Guide to Science and Belief*, Michael Poole addresses this issue and explores the interaction between science and religious beliefs.

Topics covered include:

- Do science and the Bible contradict each other?
- Is faith believing what you know isn't true?
- Does science rule out miracles?
- Has the work of Darwin ruled out the idea of a creating God?
- Is the universe a cosmic accident or God's design?

Updated and enlarged to take account of the changing field, the *User's Guide to Science and Belief* is a concise, clear and colour-illustrated introduction, ideal for both general readers and students.

The *User's Guide to Science and Belief* is available from all good bookshops and from www.lionhudson.com. In case of difficulty, please contact Marston Book Services on 0800 121 8830
